Laser Hair Removal

No more waxing, shaving, or painful electrolysis. You will permanently be free from the daily chore of having to shave, eliminates rash or ingrown hair associated with shaving or waxing, replaces dense body hair with aesthetically more pleasing finer to no hair growth, or gain self-confidence.

You will feel little to no sensation during the procedure. It works by emitting a pulse of laser energy to the hair follicle and they become disabled. Since this system does not cut the skin in any way, you can return to normal activity immediately. Permanent hair removal takes between 6 and 15 treatment sessions, depending on factors like the colour of your hair and skin, as well as hormone levels. We specialise in treating all skin and hair types. One can thin out hair instead of removing it all as every session will get rid of a certain percentage of the hair. If your objective is to get rid of all hair, then the treatment is continued.

Laser-Facials | Photo-Facials

"The No.1 Facial in the world." Softens fine lines and wrinkles, shrinks pores and decreases or eliminates redness found deeper in the epidermis. Removes age, sun spots, sun-induced freckles, and dark eye-bags. Exfoliates skin impurities. Evens out skin colour and tone, clarifies complexion, eases signs of aging, reduces redness and flushing from broken veins. Stimulates collagen formation. Giving your face a more youthful appearance with immediate results from the very first treatment. For effective results 5 to 12 treatments are recommended, in monthly intervals.

Vein Removal

Laser removal of blue and red veins are now possible from areas like your face down to your legs. For effective results expect 1 to 3 treatments from a specific area depending on age, density and depth of the vessels.

Aphrodite Laser Clinic

Low Level Light Therapy (LLLT)

- Wound healing and swelling
- Minimize recent scar formation
- Burns, cold sores, fever blisters
- Deep musculoskeletal (joint, tendon, bone) pain
- Pain and pressure relief effects
- Anti-inflammatory and anti-bruising effects
- Improved blood circulation, and sinus congestion

Acne Clear Laser Facials

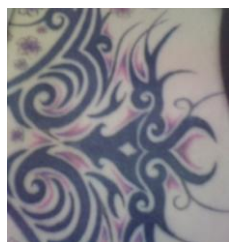

While not a life threatening condition, acne can be upsetting and disfiguring. Untreated acne can lead to serious and permanent scarring. Don't pick, scratch or squeeze pimples yourself. When pimples are squeezed, more redness, swelling, inflammation and scarring may result. The redness around a pimple is caused by the body's inflammatory response to fight an infection.

If you have any kind of acne, even severe acne, there is nothing than laser that works best to clear your complexion. 10 Times more powerful than any other treatment for adults and teenagers with fast, effective results. Laser eliminates acne bacteria, spots, pimples, redness, pus, inflammation, blocked pores, blackheads and white-heads with no side effects.

It is recommended that clients have an initial 1 to 3 intense laser treatments weekly and then with monthly follow-ups in conjunction with a good cleansing regime in between their treatments, keeping the skin in excellent condition. As lasering prevents future outbreaks clients after their initial treatments, return a few months out of the year for a maintenance session.

Tattoo Removal

We perform successful Laser removal of black, blue, brown and some red-yellow tattoo's. Laser tattoo removal works by targeting the topmost layer of the pigment particles thus removing a layer of the tattoo with every treatment. These pigment particles are then removed by the body. Greater than 95% fading or complete removal is achieved.

On average, tattoos require 3-10 treatments, spaced 8 weeks apart or as required. The number of treatments depend on the type and depth of the ink in the skin. The treatment has a stinging sensation during the procedure which is minimized by a skin cooling device. If you are sensitive a topical anaesthetic cream like 'Emla' (available at pharmacies) may be used before a treatment. After the treatment, the area will feel similar to a slight sunburn with mild blistering and scabbing occurring which disappears. A scar repair healing lotion, moisturizers and sun-blocking creams are recommended.

Aphrodite Laser Clinic

Chemical Face Peels

Peel treatments are suitable for skin rejuvenation in all skin types (sensitive, young, mature, white, black, asian, male, female). It exfoliates the skin and unblocks pores, removing blackheads and tightening pores, assists with rosacea (reddened skins). It also smooths wrinkles, improves sun-damage, repairs and re-elasticizes, normalizes and controls pigmented or blemished areas, improves old acne scarring, improves function of old scarred areas on the face & body, and removes signs caused by the aging process.

A choice of 4 concentrations to treat all skin problems - 20% 40% 70% 90% are available. Safe to use all year round with no contraindications, does not make the skin sun sensitive, even safe during pregnancy. With regular peels the skin becomes firmer, smoother, even in colour and texture. Treatments are spaced in monthly intervals or as recommended by consultant.

Preparation Before Laser Treatments

For laser hair removal only: Shave the treatment area 2-3 days beforehand, to allow a 1mm growth for the laser to target. None of the following procedures are allowed to the area prior to or between treatments, else a waiting period must be adhered to: Toners = 48 Hours; Waxing/Tweezing/Sunburn/Sun-tanning/Peels = 2 Weeks; Electrolysis/Bad Sunburn/Deep Peels/Depilation Creams = 4 Weeks.

For all treatments: Do not wear make-up, creams, moisturizers, lotions, deodorants, powders, or jewellery in the area being treated. You can apply these after the treatment. Men kindly be clean shaven for facials.
